| 涉及动物实验/人体标本的主要内容：<br>Content concerned with animal experiment/human body specimen:<br>被试需完成三项基于 Stroop 任务的实验：在计算机上快速判断词语含义并按键（如幸福/悲伤、婚礼/葬礼、现代政权/古代政权），同时忽略文字颜色（红、黑、白、黄）。每项实验包含 160 次随机试次，要求大学生被试在练习达标后，以最快速度准确反应。通过对比不同颜色下词语判断的反应时差异，探究红色与中国文化中幸福、婚礼概念的隐性关联，以及颜色与政权的内隐联结。<br>Participants performed three Stroop task experiments on a computer, rapidly categorizing words (e.g., happiness/sadness, wedding/funeral, modern/ancient political power) while ignoring font colors (red, black, white, yellow). Each experiment included 160 randomized trials. Chinese university students were required to respond quickly and accurately after passing practice sessions. By comparing response time differences across colors, the study examined implicit associations between red and culturally specific concepts (happiness, weddings) and color-political power linkages. Data excluded errors and outliers beyond $\pm 3$ SD. |   |                       |                 |                          |                        |
